

Compact & Configurable Bevel Gearboxes

TwinGear and PowerGear Series

Reliable and Highly Efficient

NIDEC DRIVE TECHNOLOGY CORPORATION

Legacy of innovation in Bevel Gearing

Nidec Drive Technology Corporation acquired MS-Graessner GmbH & Co. KG, based out of Dettenhausen, Germany, in 2018. This strategic acquisition gives us over 60 years of design and manufacturing experience in the area of high precision helical bevel, spiral bevel and hypoid gears. It strengthens our position in the European market by giving our global customer base unparalleled access to a broad range of gear technologies with local product distribution and expertise.

By way of the Gleason manufacturing process, our Dettenhausen facility and highly skilled 120-person workforce excels in producing solutions for custom and highly specialized applications. Whether it's for a specific single piece project or for mass production, we develop the best possible engineering solution—providing more power density, less noise, higher efficiency and more precision at every turn.

Our bevel gear product families—TwinGear and PowerGear—were developed as a result of in-depth knowledge of different industry sectors and applications. We offer a wide range of frame sizes, ratios and mounting configurations to meet virtually any requirement. The success of our customers is the top priority for Nidec DTC. Our product quality, reliability and availability give our customers a competitive advantage as they continue to improve their machine performance to compete globally.

TWINGEAR SERIES

TwinGear harnesses the power of two with its hypoid primary stage and helical secondary stage. This gear train redefines power, compactness and precision, setting benchmarks in the industry. High torsional stiffness and backlash <6 arc-minutes and make it a contender in dynamic motion control applications. With ratios spanning from 15-75:1 and maximum acceleration torque as high as 11,250Nm, TwinGear can be applied confidently across a myriad of applications.

Our customers demanded a more compact helical bevel design and we answered. TwinGear can fit in the narrowest space envelopes. Solid shaft, dual shaft, hollow shaft and shrink disc mounting interfaces provide the ultimate flexibility for machine designers. Rated up to 8,000rpm, this product outperforms in high speed, continuous duty applications while staying quiet and cool.

TWINGEAR SERIES

- High performing helical-bevel two-stage gearbox with maximum acceleration torque as high as 11,250Nm
- Low backlash (<4 arc-min) with exceptional torsional rigidity
- 8 Frame sizes and 8 ratios available, up to 75:1
- Suitable for high input speeds up to 8,000 rpm
- Extremely compact design to fit into challenging space envelopes
- Assembled in Germany

Featured Highlights

- ① Hypoid primary stage with optimized contact pattern for uniform load distribution, low noise and high transmission accuracy
- ② Helical secondary stage for high torque generation
- ③ Tapered roller bearings at input and output for high radial and axial load capacity
- ④ Four output mounting styles for maximum flexibility: Keyed solid shaft, keyed dual shaft, keyed hollow shaft and hollow shrink disc
- ⑤ Simple, low inertia connection to various servo motors using adapter flange and stiff zero backlash coupling
- ⑥ Output seal allows for IP64 protection

*1 At nominal input speed, service life is 30,000 hours.

*2 The maximum torque when starting or stopping operation. Permitted 1,000 cycles/hour.

*3 The maximum torque allowed under a stress situation. Permitted 1,000 times during service life.

*4 Average input speed at nominal torque. Maintain housing temperature below 90°C.

*5 The maximum intermittent input speed.

*6 Maximum radial load gearbox can accept. Measured at center of output shaft at 400rpm.

*7 Maximum axial load gearbox can accept. Measured at center of output shaft at 400rpm.

*8 The efficiency at full load.

*9 At nominal output torque. Does not include lost motion.

*10 Measured at output, 2% load and max 10Nm.

*11 Measured at 1,500 rpm input at partial load.

*12 Based on S5 duty cycle <60% and <20 minute run time.

Gearbox Selection and Maintenance

Gearbox Selection Procedure

*Above selection is based on S5 cyclical duty cycle [DC] of <60% and run time [RT] < 20 min. Contact us for sizing assistance for S1 continuous operation.

Cycle Factor [f ₀]	<1,000 cycles/hour	1,000-3,000 cycles/hour	3,000-5,000 cycles/hour	5,000-7,000 cycles/hour
<1 hours/day	1.00	0.85	0.75	0.75
<8 hours/day	0.75	0.65	0.65	0.55
<16 hours/day	0.70	0.60	0.55	0.40
<24 hours/day	0.65	0.55	0.40	0.35

Gearbox Maintenance and Lubrication

Nidec Drive Technology Corporation TwinGear helical bevel gearboxes are supplied lubricated unless requested otherwise. For operating temperatures up to 80°C, we recommend the use of mineral hypoid gear oil API GL-4 to MIL-L-2105-A specification. For operating temperatures up to 95°C, we recommend the use of synthetic gear oils based on Poly-Alpha-Olefins (PAO) and for temperatures of up to 120°C, polyglycol-based synthetic gear oils to ISO VG-Class 150 (DIN 51519) or CLP DIN 51517 specification. In case of high temperatures, special seals must be specified.

The first oil change must be carried out after 500 operating hours. Draining the oil should take place immediately after the unit has been shut down, while the oil is still warm. Further oil changes are recommended every 5,000 operating hours and time intervals should not exceed 18 months. Oil drain plugs are fitted on all sides of the gearbox except the input side. Before re-filling, please ensure that all drain plugs have been inserted and tightened with the exception of the oil filling screw. In cases of doubt, please use new oil seals. When changing oil, we recommend that you fill the gear unit with the type of oil previously used. In particular, synthetic oils must not be mixed with mineral oils or other oil variants. When changing from mineral oil to synthetic oil, the gearbox must be rinsed thoroughly with the new oil type.

Upon request, gearboxes can be supplied with a lubricant indicator (oil sight glass, angular oil level indicator, oil dipstick). This requires details about mounting position and speed. Gearboxes without a lubricant indicator can be filled with the recommended average quantity of oil when speeds are low and the gearbox is installed pointing upwards. If the gearbox has a lubricant indicator, filling can be carried out precisely. The middle of the oil sight glass indicates the minimum fill level, whereas the maximum fill level is reached when an air bubble above the oil is still visible in the sight glass.

The condition of the gearbox, especially the leak tightness and the oil level must be checked regularly. Shaft seals which leak must be replaced to ensure operational safety. Please contact us for more detailed disassembly and lubrication instructions as well as lubricant options. Service kits with wear parts are available from our service department. Our products can also be sent back to the factory for inspection and lubrication.

* Oil quantity is dependent on ratio, speed, shaft arrangement and installation position.

POWERGEAR SERIES

PowerGear is a versatile, highly configurable and robust spiral bevel gearbox that fits a wide range of power transmission and motion control applications. Its modular design has numerous shaft configurations and driving orientations that can be adapted to any requirement—torque amplification, speed increase or reduction, inertia matching or turning a right angle to save space. All six sides of the gearbox can be used for mounting.

PowerGear frame sizes range from 27mm to 450mm, making it the only product that can go into small medical devices as well as large earth-moving machinery. PowerGear features the highest torque density in the industry ranging from 2.2Nm to 10,500Nm while staying 98% efficient. Mounting adapters are available for servo, stepper or AC induction motors. High speed, high torque, reduced backlash and cooling options are available for the most demanding duty cycles or environments.

POWERGEAR SERIES

- Versatile spiral bevel gearboxes with numerous shaft configurations that can be oriented in any direction
- Compact, rigid design with reduction ratios as low as 1:1
- 15 Frame sizes with maximum acceleration torque up to 10,500Nm
- High torque, high speed and low backlash available as standard options for demanding applications
- High efficiency rating of 98% helps save on energy costs
- Assembled in Germany

Featured Highlights

- ① Spiral bevel gears; precision cut, hardened and lapped for optimized contact pattern and uniform load distribution
- ② Tapered roller bearings at input and output for high radial and axial load capacity
- ③ Compact, rigid, ductile cast iron housing (aluminum for sizes 27-45). All six sides can be utilized for mounting
- ④ Numerous input and output shaft options available, including solid output, keyed hollow output, dual output or shrink disc. Input side can be shaft-in or motor-ready with adapter and coupling
- ⑤ NBR seals used for IP64 protection. Optional Viton seals available. Lubricated for life

	170			123L: Keyed Hollow Shaft with Solid Extension	
	210			Hollow Output with Shrink Disc Shaft (33-45 Only):	
	240			1LSV: Shrink Disc Shaft Right	
	280			3LSV: Shrink Disc Shaft Left	
	360			12LSV: Shrink Disc Shaft Right with Solid Extension	
	450			23LSV: Shrink Disc Shaft Left with Solid Extension	

* Motor mounting code varies depending on the motor. Contact us to configure the code.

* See page 37 for shaft arrangement detail.

* High Speed Option utilizes KL/KH mounting type codes in lieu of FL/FH codes.

* Frame sizes 27-54 have a more limited ratio offering. Check specifications section for ratio availability.

*1 At nominal input speed, service life is 15,000 hours.

*2 The maximum torque when starting or stopping operation. Permitted 1,000 cycles/hour.

*3 The maximum torque allowed under a stress situation. Permitted 1,000 times during service life.

*4 The average input speed applied at 20% of nominal output torque at 20°C ambient temperature.

*5 The maximum intermittent input speed.

*6 Maximum radial load gearbox can accept. Measured at center of output shaft at 400rpm.

*7 Maximum axial load gearbox can accept. Measured at center of output shaft at 400rpm.

*8 Based on solid input shaft and dual solid output shaft.

*9 The efficiency at full load.

*10 At nominal output torque. Does not include lost motion.

*11 Measured at output, 2% load and max 10Nm.

*12 Measured at 1,500 rpm input at partial load.

*13 Based on S5 duty cycle <60% and <20 minute run time.

*14 Maximum radial and axial load ratings dependent on ratio. Contact us for values.

450	580	450	140	30	520	350	22	M20x40	21.2

* Four socket head screws are included

Shaft Geometry

1. Shortened shaft.
2. Smooth shaft.
3. Shrink disc shaft.

Environmental

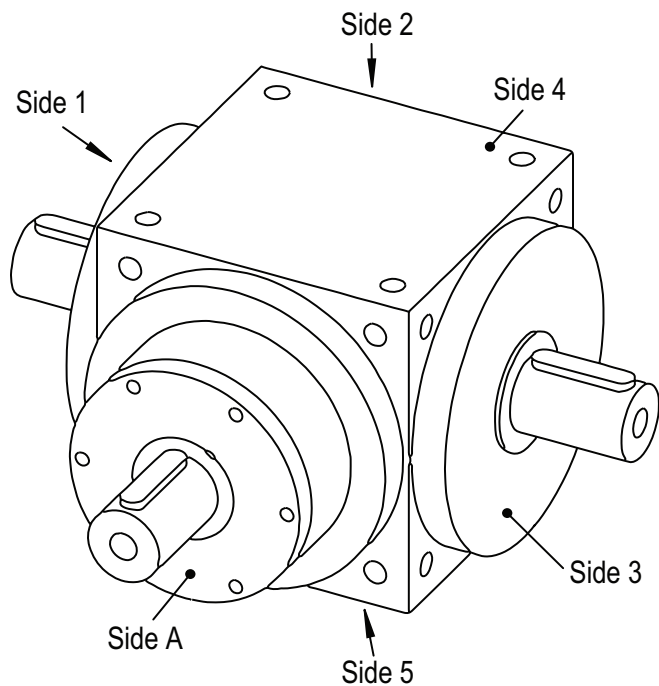

1. USDA Food Grade Oil.
2. Stainless steel housing, output shaft & fasteners.
3. Viton or Teflon seals.
4. ATEX compliance.

Cooling

1. Oil circulation system: Gearbox is supplied ready for connection to external oil supply. External oil supply may consist of an oil tank, air-oil cooler, oil pump and pipework between oil tank and gearbox.
2. Forced oil circulation system: For higher speeds, it may be necessary to use forced lubrication to ensure maximum life for the gear teeth and bearings. Gearbox is connected to an external pressurized lubrication system.
3. Aluminum cooling fins: Increased heat dissipation.
4. Aluminum cooling fins with fan: Further increased heat dissipation via mounted radial fan.
5. Water cooling: Gearbox is supplied ready for connection to an external water cooler. The oil reservoir is cooled by a cooling coil.

Mounting Positions

Gearbox Selection and Maintenance

Gearbox Selection Procedure

*Above selection is based on S5 cyclical duty cycle [DC] of <60% and run time [RT] < 20 min. Contact us for sizing assistance for S1 continuous operation.

Thermal Performance Limits

Duty Cycle [%]	100	80	60	40	20
Factor	1.0	1.2	1.4	1.6	1.8

Ambient Temperature [°C]	10	20	30	40	50
Factor	1.2	1.0	0.87	0.75	0.62

Frame Size	54	65	75	90	110	140	170	210	240	280	360	450
Thermal Performance Limit P_{therm}	1.6	2.5	2.9	4.1	5.7	9.2	13.2	21.2	28.4	38.4	60.0	93.4

* Based on 20°C, 100% duty cycle.

* Gearbox performance is limited by max permissible oil bath temperature. The actual performance must not exceed the permissible limit when in continuous operation.

* For intermittent operation or in the event of increased ambient temperature, the factors above can be applied as guidelines for determining the permissible thermal performance limit.

Gearbox Selection and Maintenance

Gearbox Maintenance and Lubrication

Nidec Drive Technology Corporation PowerGear spiral bevel gearboxes are supplied lubricated unless requested otherwise. Frame sizes 27-45 are supplied with synthetic grease and are maintenance free. Sizes 54-110 are oil filled, but do not include oil drain holes and are therefore also maintenance free. Oil changes can be performed on frame sizes 140-450.

For operating temperatures up to 80°C, we recommend the use of mineral hypoid gear oil API GL-4 to MIL-L-2105-A specification. For operating temperatures up to 95°C, we recommend the use of synthetic gear oils based on Poly-Alpha-Olefins (PAO) and for temperatures of up to 120°C, polyglycol-based synthetic gear oils to ISO VG-Class 150 (DIN 51519) or CLP DIN 51517 specification. In case of high temperatures, special seals must be specified.

The first oil change must be carried out after 500 operating hours. Draining the oil should take place immediately after the unit has been shut down, while the oil is still warm. Further oil changes are recommended every 5,000 operating hours and time intervals should not exceed 18 months. Oil drain plugs are fitted on all sides of the gearbox except the input side. Before re-filling, please ensure that all drain plugs have been inserted and tightened with the exception of the oil filling screw. In cases of doubt, please use new oil seals. When changing oil, we recommend that you fill the gear unit with the type of oil previously used. In particular, synthetic oils must not be mixed with mineral oils or other oil variants. When changing from mineral oil to synthetic oil, the gearbox must be rinsed thoroughly with the new oil type.

Upon request, gearboxes can be supplied with a lubricant indicator (oil sight glass, angular oil level indicator, oil dipstick). This requires details about mounting position and speed. Gearboxes without a lubricant indicator can be filled with the recommended average quantity of oil when speeds are low and the gearbox is installed pointing upwards. If the gearbox has a lubricant indicator, filling can be carried out precisely. The middle of the oil sight glass indicates the minimum fill level, whereas the maximum fill level is reached when an air bubble above the oil is still visible in the sight glass.

The condition of the gearbox, especially the leak tightness and the oil level must be checked regularly. Shaft seals which leak must be replaced to ensure operational safety. Please contact us for more detailed disassembly and lubrication instructions as well as lubricant options. Service kits with wear parts are available from our service department. Our products can also be sent back to the factory for inspection and lubrication.

Oil Quantities

Frame Size	54	65	75	90	110	140	170	210	240	280	360	450
Average Oil Quantity (liters)	0.05	0.07	0.1	0.2	0.3	0.4	1.0	2.2	2.6	3.0	9.0	22.0
Maximum Oil Capacity (liters)	-	-	-	-	0.35	0.6	1.2	2.5	3.5	5.0	15.0	32.0

* Oil quantity is dependent on ratio, speed, shaft arrangement and installation position.
